Sometimes, thanks to image editing software, creativity is as easy as using basic overlays and tools to create new and different images. See below for some examples of how to use different Photoshop tools to alter an image. Use a pen tool to draw on an image Using a single layer, create your basic form. Next, using the pen tool, draw on the part of the form you would like to have in the photograph. Select the fill on your form and set it to a transparent background, which will allow you to see through the background. Use a layer mask to add a patterned background 1. Create a new layer over the area where the background is shown. 2. Set the fill color to the color of the background. 3. Choose File > Load Layers, select the second layer, and open the background you would like to add. Adjust the layer mask to your desired effect. This is a tutorial on how to use a couple of different variations of the Pen tool to sculpt elements in a photo. You can read more about the pen tool on this tutorial. Use a drawing tool to add transparent elements As with the pen tool, use a single layer to create your basic form. Draw elements over the form on the layer, and then use the Eraser tool to remove unwanted parts. The Eraser tool lets you work on individual color channels, so you can remove a color or pixel-by-pixel. Use a layer mask to cut out unwanted elements 1. Using the Pen tool, draw directly on your photo and create a shape. Make sure it's on a separate layer from the rest of the photo. 2. Use the Layer Mask panel to create a mask that outlines the area that you'd like to cut out. It's very easy to create one using the Pen tool, simply draw the shape of the area you want to cut out in an irregular way. You can hide parts of the layer and keep the rest visible. 3. Cut out the unwanted parts of the image. You can use the Eraser tool with a brush to remove the outside of the shape. Use a layer mask to add details 1. Draw in details using the Pen tool. It can be tricky sometimes, but it's incredibly easy to create a custom drawing tool. Create a layer over the shape you want to add details on, then use a picture or image
