Originally designed for creating two-dimensional diagrams and drawings, AutoCAD is now used in many industries and functions, such as: Civil engineering Healthcare Industrial design Structural engineering Architecture Architectural engineering Engineering and drafting In addition, AutoCAD is used by the US military for special projects, and many government agencies and institutions use it for public projects. The use of AutoCAD by architects and engineers is estimated to exceed AutoCAD use by electricians, surveyors, and several other groups. AutoCAD is the most widely used CAD program and its capabilities have made it the most popular CAD software on earth. The "official" history of AutoCAD begins in 1989, when John Kao, a computer technician at San Francisco State University, created a graphical editor of the software. Although Kao originally developed AutoCAD for himself, a later version of the program was released to the public in 1991. Since then, the number of licensed AutoCAD users has increased dramatically. AutoCAD was in its second generation by 1998. It has been in its third generation since 2002. By 2006, the number of AutoCAD users was projected at 90 million. By 2013, AutoCAD had 40 million users. Multiuser AutoCAD AutoCAD 2004 introduced a User Interface Update Program, which is designed to synchronize the settings and user preferences of a user profile with those of another user's profile on a networked computer. This allows multiple users to share a single AutoCAD installation over a network, with each user having his or her own user profile. Interactive editing and execution AutoCAD 2017 introduces interactive editing, which includes a tool called "Auto Edit", that allows non-designers to enter and edit 2D and 3D geometry without having to learn the software code. This is a semi-automated, low-cost method that removes the need for many people who would otherwise create custom applications to do so. A similar function called "Scribble" was introduced for AutoCAD 2014 and used for sketching ideas on drafting papers and other input surfaces. AutoCAD also supports a built-in function, called "Object Snap", that allows the user to align objects in such a way that they can be assembled in a drawing. Programming languages AutoCAD has its own dedicated programming language. It is based on the Visual LISP programming language which was developed in the mid-1980s and allowed the designers and engineers of the time to create their own tools. AutoLISP was first implemented in 1987 for the AutoCAD LT package and AutoCAD NT was the first version of AutoCAD to support the language. AutoLISP provided a very

high-level programming language for AutoCAD applications. It also included an editor/compiler for the programming language. Using LISP-based applications, developers could create functionality and applications quickly. In 1996, as AutoCAD grew in popularity, AutoLISP was slow to keep up. To improve on LISP's speed, the AutoCAD developers needed a new programming language. To this end, a new programming language called Visual LISP was introduced. In 2003, the Visual LISP programming language was removed from AutoCAD. In 2006, a new scripting language, VBScript, was introduced. In the version 15, the new scripting language allowed a general-purpose user to use AutoCAD functions as their scripts. The same feature was also implemented into the AutoCAD LT program. In the 2016 release of AutoCAD LT and Professional, the scripting language has been removed and replaced with Visual Studio Code ca3bfb1094

Go to Menu and type: "Formula" Then press the "..." button and type: "MESHOBJECT" Find the "OBJECTINMESH.LOG" and save it as ".LOG" file. Go to the directory where you saved it. Run the downloaded file "OBJECTINMESH.LOG" and copy the key. What the key allows you to do Importing the mesh Autodesk also has a free product that allows for importing such files. In most cases, the key also generates a key which will allow you to access this file. But in some cases, you will have to upload it to Autodesk's own file share. This share is called "Shared View". You need to download it, save it, and upload it. Uploading the file Go to Autodesk's "Shared View" by following this link: Go to: After you have logged into your account, go to My Projects, and you should see the file OBJECTINMESH.LOG in the "Shared View" section.
