FolderDefence Pro is a tool that is designed to help you lock, hide, and password-protect your files and folders. You can even set up a master password for protection which won't be visible in the program's interface. The utility supports several security levels: deny execution, deny access, hide, lock, and unprotect. You may also build up a list with programs that are allowed to bypass protection and access the files being hidden. More information on this program is presented below. Table of Contents: FolderDefence Pro Installation type You can run the utility in a stealth installation mode or a normal one. The latter is preferred as it will not appear in the "Add/Remove Programs" and "Start" menus. FolderDefence Pro installation folder Your application is typically installed in %PROGRAM_FILES%\FolderDefence Pro in the form of a binary file called FolderDefencePro.exe. It will be hidden by default. FolderDefence Pro installer description The software is designed to work on Windows Vista, Windows 7, Windows 8, and Windows 8.1 operating systems. It is not a standalone application and should be installed on an existing system before it can be used. FolderDefence Pro requirements If you run the utility on a 32-bit version of Windows, the minimum supported RAM is 2 GB. When you decide to install the tool on a 64-bit edition, at least 4 GB should be available in your RAM. FolderDefence Pro requirements Windows Vista and Windows 7 support all types of CPUs, including Intel and AMD processors. Windows 8.1 and newer systems include a 64-bit version of the operating system, so they won't be able to utilize the tool even if you employ a 64-bit driver, which is usually recommended. FolderDefence Pro features You can employ several security levels, that is deny execution, deny access, hide, lock, and unprotect. These options are offered for simply hiding or locking files and folders. They can be enabled in no time by opening up the FolderDefence Pro application. The utility supports the capability to create a master password that will help you protect your settings. A file named Password.txt is created on the system and can be used to enter the master password that should be used when FolderDefence Pro is launched. A small but handy application that protects your private files from others in the same machine and helps you set up a password-protected folder. This utility comes with several security modes that protect your file or folder against unauthorized access. In addition, the program helps you make your files read-only, or even deny execution in case you do not want other users to access them. A master password is used to protect the collected settings. In addition, you can collect a list of programs that bypass protection and access the files. Plus, the utility allows you to delete or hide a list of files from the 'Recent' folder, or shred data from a storage device to make sure they cannot be recovered.
