Selkie Quick File Transfer Latest

Selkie is small bootable program in CD-ROM drive of your computer. With Selkie

quick file transfer you can conveniently transfer files between two PCs. When you insert the CD into your CD/DVD drive in the source computer, and turn it on, you will see a menu, on which you will be able to specify the destination computer, which folder to transfer the files to, what kind of files to transfer, and the amount of hard disk space to be used for backups. When you start to transfer files with Selkie quick file transfer, it sends a short power-on command via the network to

the destination computer and then waits for a response. The instruction to transfer a file is transmitted in the same way to the destination computer. The instruction includes the file's name, its type, its size, its parent folder and the current date and time of the file (or creation date for normal files). All of the files on your source computer are transferred to your destination computer and organised according to the folders selected by you. Once the transfer is complete, you simply turn off the source

computer and enjoy the full benefits of your new computer. In addition to its easy-to-use interface, it can be run as a server by remote access. It is completely secure for everyone - even admins. In case of any problem, its extensive log file makes it easy to identify the cause of the problem. Selkie quick file transfer supports FAT16 and FAT32 filesystems. SQFT can easily transfer all files from the source computer:

- Documents, images, MP3 files, video files, PDF files -
- Folders - Program files - Junk

files - Passwords - License files
- Audio CD/DVD files - Library
(music library) files - Pictures -
Electronic mail files - All files
from all folders and subfolders

Selkie Quick File Transfer turns the source computer into a file server. The source computer is shown as a folder. When you open it, you will see all the files on this computer. The destination computer is shown as a folder, too. You may copy a single file to the destination computer. To move a file from one folder to another, just drag it. The destination folder has to be open for you to do this. You can use any location as a destination folder. If the

destination folder is on a CD/DVD, you have to be connected to the other computer before you move the files. Selkie Quick File Transfer is easy to use: After you start Selkie Quick File Transfer, you will be asked to click on the "Start" button to run the program. The first time you start Selkie Quick File Transfer, the program will run its user interface program to test the network connection. For example, if the source computer runs on the Internet, while the destination computer

runs on a LAN, you will see such messages as "Retrieving settings from source computer" and "Retrieving settings from destination computer". When you see the message of the destination computer, you can press the "Next" button to move on to the network manager. □ Click the "File" button to open a destination folder for files on the source computer. □ Click the "Copy" button to copy the files from the source folder to the destination computer. □ Click the "Move" button to move the

files from the source folder to the destination computer. □ Click the "Exit" button to close the application. NOTE: If you are transferring files from one FAT32 formatted drive to another, you may use the DRIVE option to specify the drive. In this case, the destination folder will be created on the drive specified. The destination folder will be automatically closed when you exit the application. If you are transferring files from one FAT32 formatted drive to another, you may use the

DRIVE option to specify the drive. In this case, the destination folder will be created on the drive specified. The destination folder will be automatically closed when you exit the application. Selkie Quick File Transfer can transfer files from and to the following drives:

- USB
- CD
- DVD
- FAT32 formatted drives
- NTFS formatted drives
- Any other partition
