- A game-with-a-difficulty-tuning - Powerful puzzle gameplay and top-notch production values - More than 50 levels - 6 kinds of labyrinths - Achievements - Visually beautiful graphics - 30+ hours to complete Let's Go Fishing! Oishii is back after a long absence and is ready to teach you the way of catching fish. Get ready to explore the mysterious depths of the ocean with 4 fun modes : Deep Sea Hunt, Deep Sea Exploration, Deep Sea Fishing and Deep Sea Fishing - Giga. Aquarium Deep Sea Hunting (Deep Sea Hunt) Leaping from the boat, try to search for the depths of the ocean with your Giga-Eye, the fish indicator. As you go deeper in the ocean, the fish you were looking at disappear. Take the depth gauge to calculate where you should dive to find them. This game also has a mini-game : catching fish with a net. Aquarium Deep Sea Exploration As you navigate the depths of the ocean with the boat, you will explore the secrets of the ocean. Collect all kinds of fish, the strangest creatures in the ocean and find out secrets about the fish. Getting the most precious fish in the world will also help you create a special weapon. Aquarium Deep Sea Fishing In the deep sea, all fish are friendly. Try the distance-only method of fishing. To get close to the fish, target your Giga-Eye with a small fishing net. By changing the fishing net, you will be able to get different kinds of fish. By collecting the rarest fish in the world, you can make an exclusive weapon for your Giga-Eye. Deep Sea Fishing - Giga Finally, if you also want to introduce a few tricks in order to make the most of catching fish in your Giga-Eye, the Deep Sea Fishing - Giga mode will do just fine. It involves several methods, such as the use of rings, collecting the candies, the technique to find the right moment to fish, etc. All it takes is a little effort, so just try it out! Let's Go Fishing! Oishii is back after a long absence and is ready to teach you the way of catching fish. Get ready to explore the mysterious depths of the ocean with 4 fun modes : Deep Sea Hunt, Deep Sea Exploration, Deep Sea Fishing and Deep Sea Fishing - Giga.

I would like to change a value in the first activity if the button is pressed. I use AsyncTask for this. The problem is that the method setText() for textView in the first activity doesn't change the value if i use the refresh button on the first activity. And that's the whole code of the first activity: package com.example.first; import android.app.Activity; import android.content.Intent; import android.content.SharedPreferences; import android.os.AsyncTask; import android.os.Bundle; import android.view.View; import android.view.View.OnClickListener; import android.widget.Button; import android.widget.TextView; public class FirstActivity extends Activity implements OnClickListener { Button bRefresh; TextView tvText; int i = 0; @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_first); bRefresh = (Button) findViewById(R.id.btnRefresh); tvText = (TextView) findViewById(R.id.tvText);

What's new:

SBSP - Congonhas Airport is a modern FBO somewhere between Sintra airport and the capital of Brasilia. The theme is inspired by the Festival of Sacred Music at the National University of Brasilia, where most of its towers were launched on display and those performing were the Cathedral of Brasilia at the top, and the MAI/FAD and ANAC bombs raining down around the city. The Afterburner doesn't need to be added to autopilot the make-shift runway and particularly to enable the rockets to land, as the complete ground and building configuration is mirrored and the make-shift runway has enough bays to hold all the engines. I created a new local file and I created a new texture-map for the airport. The landing lights are red instead of green, and the takeoff guide lights are white instead of red. Since there is no terminal tower now I have rendered even the custom GRB tower. The cluster is the same as it was as standard, but now covers the new airport itself. I've used the rotating, when possible screenshot of the tower.For the Shaders I used the tutorials by Gmbh:Material Design using Skinned Mesh Reflections: deferred rendering and running a "simple" GI: The tutorial for HRR: How to add substance paint for VRML: X-Plane 11 - Add-on: Globall Art - VRML Custom plane Add-on uploaded by the author 5:45 in the video stills from flight test. I will put the source of my renderings and textures in the main page. Currently I have a depot here: For various samples which I will put here soon: For custom shapes to create a bustling airport in your Own city or Oasis theme.

Your mission is to defeat the darkness before Neptune returns to take the mantle of Goddess! As one of the seven new playable CPUs, you must fight to reclaim the hearts and souls of the Simulacrum from under the control of the Sinister Six, reclaim your memories, and prevent the other CPUs from breaking into pieces! With new enhancements and opponents for each of the seven CPUs, solo and co-op modes, and new battle features, there is never a dull moment in the JRPG! (Disclaimer: While Nomad Games did provide some of the media for review purposes, the opinions expressed in this review are entirely our own) Takamasa Sakurai thought he was on his way back home. After taking a nap in a beach village on the shores of the Mediterranean, he walked to the local aquarium and left his wallet inside to watch some sea creatures. Instead of a wonderful reward, he was greeted by a very large man in a sea urchin costume. The man demanded to borrow his wallet, and locked Takamasa inside with a key. Takamasa decided that, since this man was obviously a con artist, he might as well give him the title. To his surprise, the key opened the aquarium's seaweed cage. Takamasa ran away as soon as he saw his wallet was gone, but by this point he had been locked in for quite some time, and looked sickly. He wasn't so lucky to escape the clutches of the other six CPUs, who had captured him at his home and opened a breach in his quantum processor! Enter Takamasa Sakurai, now CPU-2 and leader of the reformed Simulacrum. With the help of the other CPUs, his crew, and even the vanquished Nameless One, he will set out to rescue his friends and family in Gamindustri and take down the remaining CPUs, prepare the Earth for the return of Neptune, and make sure this never happens again! But this isn't the first time these characters have faced off. Rumours and rumours about their first engagement, and even a few misdirection and guest characters by Sailor Moon, have cropped up over time. Now, with long periods of peace behind them, it's time to take this rumour to the next level: Giant Battles! Creating a new plot and narrative path as crazy and as dark as the Legend of Zelda series would be difficult enough, but also making
