A new “advanced” player model, a new artificial intelligence, and a host of new off-ball and goalkeeping mechanics are all built on the foundation of the new “fully playable” “HyperMotion” Engine, providing the foundation for a range of new and innovative ways to move and play. New “HyperMotion” Engine Technology The new “HyperMotion” Engine is set to change the way that a game like FIFA is played, and in turn will impact the way that it is watched and enjoyed. The new engine is a bidirectional motion-capture platform, which allows players to perform a range of actions in all phases of the game. Players will be able to use their own limbs and movements to move the ball – without the need for a player-controlled ball. Players will also be able to combine their own unique and dynamic football skills into their game. The new “HyperMotion” Engine is fully playable in FIFA Ultimate Team as well as on the football pitch in FIFA 22. In terms of gameplay, every player’s movements can now be calculated using motion capture data from multiple real-life players, allowing the game to be played with more authenticity. In terms of player control, the “HyperMotion” engine will allow players to perform a variety of actions using their own limbs and movements, which they would usually perform naturally. Players can be distracted by artificial intelligence off-ball cues, parry intercepted passes, win free-kicks, set up shooting or scoring goals, or defend opponents. The “HyperMotion” engine is now playable in all FIFA Ultimate Team modes. AI Improvements The “HyperMotion” Engine will also allow football players to make improvements to their game by learning their opponents’ game play from the new, real-life Motion Capture Player data, and by making adjustments based on how their opponents respond to their own play. The new AI system allows the new engine to learn from its predecessors over many seasons. As the new AI continues to get better at tailoring its own game to suit your style of play, you will be able to make more rewarding tactical adjustments. These will be the best of their kind, as the engine will become better at understanding what your style of play is, and you will have more control over your tactical options. Off-the-ball

FIFA is a soccer video game franchise developed by Electronic Arts. The franchise started in 1994 with EA FIFA, the first game in the series. Since then, the series has gone on to become a top seller and is the best-selling sports franchise of all time. EA FIFA was the top selling soccer game for nine years in a row from 2006 to 2014, and EA SPORTS FIFA the best selling game in the series for seven years in a row from 2002 to 2008. The franchise has sold more than 215 million copies worldwide, and nine out of ten players who buy a new console buy FIFA as well. The franchise has also spawned two spin-offs – UEFA Champions League and the UEFA Club Manager – and has won multiple awards. What's new in FIFA 20? Building off the success of last year's FIFA 19, we've focused on introducing our game-changing Player Impact Engine to FIFA. Now, every decision you make as a player will have a direct influence on the performance of your team in-game. What is the Player Impact Engine? We've reimagined many of the core game mechanics to be more intelligent, more detailed, and more contextual. But our greatest asset isn't a single gameplay change, it's the Player Impact Engine. This new technology is the heart of the game: it's what makes the difference between a good game and a great game. What kind of games are FIFA and FIFA 20? FIFA is a high intensity, physical soccer game that puts the biggest teams in the biggest tournaments. Now, we've taken the core gameplay experience and added a football-specific intelligence to deliver new and exciting gameplay experiences and deeper player progression. A soccer game? Yes, and no. On the surface, FIFA 20 is a soccer game. And we're proud of that legacy. But football is more than what you see on the field, and there are a number of ways we've managed to inject new life into our soccer franchise. First is the introduction of our new Player Impact Engine. Now you're in control of your team in a much more complex, realistic way. We know that you're a soccer fan, and this was our next big leap. Second is our new CONNECTIONS feature. Previously, players connected in Madden and FIFA by selecting
