PDF PDF stands for Portable Document Format and it is used to create Portable Document Format files. Unlike the native AutoCAD Product Key format DWG, Adobe Illustrator, InDesign, Photoshop, CorelDRAW etc., or PostScript, PDF is not based on line art but on graphic objects. This means that PDF file size is not restricted by the drawing file size and is therefore useful when generating large drawings. SCR Since the introduction of DXF CAD files, SCR (Standard Code for Rendering) was developed to render DXF files to raster format as a standalone file, but for technical reasons it is no longer supported. Technical information Data formats AutoCAD uses several different file formats to store its information in. It uses a single file per model to store the information for a single drawing and also stores a single version number per model. Data is stored in a binary format and is sent to the AutoCAD software in a similar binary format. Binary format The binary format that is used in AutoCAD is a proprietary format. It consists of several parts: The part with the extension.DWG stores the information and is the data the user can edit. The binary part of a DWG file is only half of the file, as the other half is used for metadata that describes the data. The part with the extension.DWG3 stores the same information as the binary part, but additionally the text information is stored. The text information is used to display comments, annotations, and labels. The part with the extension.DWG4 is a text file that contains XML-encoded annotations, that can be directly displayed in AutoCAD. The part with the extension.DWD stores the version of the binary and text data. It stores in the third byte of the text part the version number of the binary part. The binary part stores the version number in the fourth byte of the file. The part with the extension.DWM stores the bitmap version of the text information. The bitmap information is generated from the text information and contains information about every line and point in the drawing. The part with the extension.RAS stores the raster bitmap of the drawing. The bitmap is called a Raster image format (RIF) and is similar to an image. The bitmap is an array of numbers, that define the colors at every point in the drawing. Binary parts The ca3fb1094

In previous releases, this also could be done in two ways: by opening a new instance of a drawing file, or by opening the same drawing file in a different tab in the same drawing. The two methods of opening files in the same drawing with the same drawing file are now unified. (627960) In previous releases, two toolbars in the same drawing could sometimes overlap each other.
