Drox Operative is a turn-based space RPG that takes place in a persistent galaxy. The galaxy is ruled by a group of major alien races known as the Ancients. The Ancients have created the Drox to assist them in conquering the galaxy. The Drox Operative are under the employ of the Drox Empire. Their job is to protect the ancient races from the growing influence of younger races. These younger races arise from the remnants of sentient races formerly conquered by the Drox. You play the role of a Drox Operative who is sent to battle smaller races, regain the equipment lost to the Ancients, and to protect the younger races. You have special powers, which are varied for each race. Some races even have secret powers you can discover. Each race has a unique design, behavior, and skill system. You will need to assign your abilities to the right races to maximize your power. Key

1. The 100 best roleplaying games of all time: Today with The Black Eye - Nordland Trilogy! "Fantasy is big. There's more than enough room for all of us." About This ContentA massive fan-filmed tribute to the NES original, Lemmings, which will never have a sequel. Despite the game falling down on pretty much everything, it's incredibly fondly regarded by the gaming community and makes for an epic comedy of errors.The remaster includes all the official DLC, plus all known modding tools. ReviewsA tribute that all the fans have wanted for years - you can't get bigger than the game everyone hates!... ... This is a commercial project that was made in the spirit of fun, not an official franchise, and therefore it won't be much of a challenge. The source files, all animations and maps can be taken away and combined in any way and at any time. One of the guys even modded a Lemmings clone (and is already hard at work on a sequel) in the engine, so he even lets the other characters change with the full permission of the origin. Also there is no legal liability for any game glitches (basically the source files are yours) and it was actually easier to make this than to make a new game in the Lemmings engine. What does this mean? Now you can create and sell a game based on the one you like the best, or maybe you are an editor and fix all the bugs in any game you like. No more CC to be paid, no more submitting the game to some kind of distribution service - I'm the publisher. I will do everything for the commercial project that I did not have the time for the original.All games included are mine, you do not need permission to use them - just no matter whether you think it's your game or not. It's a game, you can use it. Is there a definition of piracy? If yes, then this does not fit it. The cost was small and it was just a hobby, so I really appreciate every donation - what I used for this project as a whole is not much, but each of the mentioned games I bought in the first place. ... I did not really do this project in a professional way, but it was just a fun thing to do. It was really hard to make this and I'm not really proud of it. I just hope it makes people smile. ... Big

What's new in RollTheEarth:

: Global Population Patterns and the Biosphere's Future ("Call For Papers") Friday, October 1, 2012 - 16:20
Swarming Planet: Global Population Patterns and the Biosphere's Future ("Call For Papers") The elevated levels of industrial civilization, its poor land management,

increased per capita consumption of energy and feed resources and changes in weather patterns have thrown the Earth's ecological system into flux and opened new realms of interdependence. The planetary habitability and sustainability for human life needs to be examined in the framework of the changing structure and dynamics of human population that may, on the negative side, take the form of a runaway process or, at least, of an accelerating trend with a possible tipping point. Hence our burning planet requires new ways of looking at the social-ecological system. Hence, with the available and newly opened-up data and visual codes, we need a rapid interdisciplinary exchange of new information, measurements, hypotheses, models and scenarios. A great deal of work has been put into understanding and manipulating Earth's ecological processes, but not enough attention has been paid to the dynamical consequences of the population growth process. "Houses of Cards", the world populations at the beginning and at the end of the second millennium - and what is going to happen in between - has never been studied from the "population dynamics" perspective. It is indeed a smoking gun for the discovery of new ways of being and a new humanity. Put together to cover a full week, the conference will focus attention on the pathways and dynamics of population change, the relations of population dynamics to the overall sustainability of the biosphere, and a review of the environmental quality and effects on human health of population-generated changes in land, water, and air, as well as the problems of lack of food and energy for human survival, and a hypothesis regarding the problem of unstable social-ecological system of the planet. Speakers should focus their future research to the community represented by the conference, to encourage young scientists to enter the field of sustainable development, and to inform the public and decision makers about the real problems and solutions. For the ordinary folks in the conference audience, it is asked to provide their views and beliefs on the population trend toward a demographic

catastrophe and if they can come up with possible solutions including the promise of any new technologies. The United Nations has defined a demographic catastrophe as “rapid and far-reaching decline in the size
