A: You could try something like: `sed -e's/(instance name=/\1 \1 i \1/g'` If that doesn't work, try specifying the RTF line in the form of a file instead. See this question on how to do that. Q: How to set property value from a static variable on c# If I have a constant in C#, and I would like to pass a value to one of the methods inside this constant. Lets say I have a class with the name of Form1 and inside this class I have a constant with the name of "myConstance". Then I'm calling a method named "properName". In Form1 class I can do this : public class Form1 { public int myConstance; public static int myConstance {get {return myConstance ;}} } Then I'm calling the method like this private void Form1_OnTop() { if (this.InvokeRequired) { // this is called even if I'm not in the form Form1 p = (Form1)Form1.Invoke(new Func(Form1.Instance.properName), form1Param); } } This will only work if I'm inside the form, if I'm not inside the form it will still go inside the method Form1_OnTop. So, how can I pass a value to the method "Form1_OnTop" without being inside the form? A: If you are on Windows Forms you could try setting a Form property value. This may require the form to be open and visible to the user, but the user does not need to be on the form. private void Form1_OnTop() { // this is called even if I'm not in the form // set property value here this.myProperty = this.myConstance; } #1, there's bound to be one or more errata, but if there are, I think most likely it won't 6d1f23a050
