
AMD Clean Uninstall Utility Helps You Remove AMD Driver Files Completely ~UPD~

Download

When you install a driver or software component, the installer creates a corresponding Windows registry key, so just like you can remove a hardware device and still have the corresponding entries in the registry to remember it, the installer also does the same thing. If you uninstalled a previous version of your graphics driver, as long as you have the same registry key, you can remove the old driver and re-install the new driver. But for those without that understanding of Windows registry keys, just like there are registry keys and files that help remind you of a specific hardware device such as a mouse, video card, and printer, there are also registry keys and files that help remind you of a specific graphics driver. The AMD Clean Uninstall Utility, which is downloadable for free from the link on this page, helps you remove both the driver file and any corresponding registry keys and files. When you first run the executable, it opens and displays the information box shown in figure 1, asking if you want to proceed with the uninstalling process. Clicking the Back button in this box closes the AMD Clean Uninstall Utility, and you can then go back to your desktop to continue working. Since the AMD Clean Uninstall Utility closes automatically once you have completed the process, just hit the Back button to exit. After the AMD Clean Uninstall Utility is finished, it gives you a few seconds to browse your file system and confirm that nothing was damaged or corrupted during the process. The next screen, as shown in figure 3, allows you to enter a name for the uninstallation. Click the "Next" button to continue.
