This modeling solution requires the storage and management systems to be optimized so that there is no extra cost. The storage types include DDR3/DDR4 main memory, NVDIMM and embedded memory. Depending on the usage, embedded memory is used in the following ways: Embedded memory of VMs: This type of memory is used for local RAM of VMs, such as for the session memory of a UI. You need at least 1 GB of main memory for your SAP HANA VMs, and this should come from DDR3 or DDR4 memory. Embedded storage devices: This is used for the storage of Java Classfiles, temporary files and the Modeling content that you create using the Modeling and the Modeling UI. The amount of storage needed depends on the content that you create and the frequency of changes. Growable storage: This is used to store data that is required for an analysis. The growable storage should be defined in a location with very low access frequency and it should therefore be located far from the modeler and from the main memory. This type of memory is cached very well and the performance is independent of access frequency. Please see attached document. Change schema name - Crystal Report - SAP-HANA.pdf. 800 KB Download. user; rainerunfug; The SAP HANA Database.. ee = {http://sites.computer.org/debull/A12mar/hana.pdf}, interhash = {5d84286128ff9fe95ed3c33d3c9a3b26},.
