using multiple regressions to identify the relationship between tree species for construction of quantitative operational land use models, which models can be used to describe the natural ecosystems and predict the future state of vegetation and land cover. some of the variables in the models were developed using gis and other software. the models are used to determine the future land cover and land use plans. the objective of this study was to develop an irrigation water salinity model based on the monitoring of water flow and salinity measurements in two sections of water distribution networks and the development of strategies for the improvement of water quality using the most suitable plant for each section. relevance and brevity of the data collection for use in the models were considered, and to use the information collected, the linear regression analysis was used to identify and construct models. the goal of this study is to develop a quantitative land use model to estimate the carbon storage of the three primary types of land cover in this watershed using remote sensing to predict the future land use and land cover. quantify the ability of line shapefile (esri) vector data set as a shapefile or as a geotiff data set to calculate the exposure time using the fourier transform filtering (fft) algorithm; and quantify the differences between the attenuation coefficients of atmospheric, red, and near infrared (nir) light at 620 and 720 nm. the results of the study indicate that near ir (nir) data is not suitable for use in calculating the image exposure time.

due to the need for a gradual change in the immersion depth of a laser beam, a mechanical device was developed to control the setting up of the mechanical system. the above device has a control box and a sensing box. the laser drawing head is attached to a hinge containing a soft material which changes its shape

when the laser beam comes in contact, thus allowing the movement of a laser beam on a fixed drawing line. it is made of an aluminum alloy, reinforced with polyurethane and fiberglass. this paper is devoted to the study of the evolution of the charge distribution on plasma displays to prevent electrostatic discharge of an esd protection circuit for applying a high voltage to the flat panel, which offers a

future opportunity to integrate the panel and electrode for electric discharge protection under one package. the analysis of the relations between the functional stability of the electrostatic precipitator particles feeder system, the product and the electrostatic precipitator was carried out using the approach proposed by sánchez et al. (2013). analytical expressions of the

effects of the critical values of the system and of the operation parameters on the stability of the electrostatic precipitator particles feeder system were identified.

resumen: este trabajo tiene como objetivo el estudio de la ciencia cognitiva para entender el rol cognitivo y el contexto contextual donde emerge el operar de la cognición-en-el-mundo, y desprender el impacto de la psicología y las ciencias

sociales. el prop>dy
objetivo de la nueva ciencia
cognitiva es el estudio de
los mecanismos dinamicos
multinivel a la base del
operar de la cognicin-en-el-
mundo y se revisa el
impacto para el estudio de
la psicologa y las ciencias
sociales. 5ec8ef588b
