This includes securing the bricks with a brad to prevent them from shifting around. You can use some creative tools, like reusable zip-ties and coffee filters, to add another layer of protection to the bricks. Once you feel confident you have the look you want, make sure to take some pictures. If there is a three-dimensional pattern on your brick, like a brick-carved gable, you can try to replicate this as it would have looked to someone who originally put that brick in place. Opinions differ on the best way to clean and seal brick after years of weathering, but there are some general principles that hold true. The first is to take it slowly. Most brick surfaces can withstand several applications of a commercial sealant, but very porous brick or brick that has been otherwise damaged or dried out may take several applications to be adequately sealed. Be sure to clean the brick thoroughly before applying the sealant and be sure to cover all surfaces. The sealant is very important to prevent water from seeping into the brick. As it turns out, there are two sides to this particular brick: the majority of brick in America is coated in a mortar-like paste, and the other half is covered by mortar, in which salts and additives are sometimes added to strengthen the mortar's performance. Coated brick, which is commonly used in building construction, has been used by artists and craftspeople for centuries and can be used effectively indoors. In masonry, bricks are painted with a paint product made from a mixture of oils, water-based polymers, and inorganic binders. Any brick that has been damaged by water may be stained brick. Brick tile can be ordered in small, medium, or large panels. Tile comes in 10-, 12-, or 15-inch widths, and 12-inch square tile is common.
