Hello,

I'm writing since I noticed to you my review of the Photoshop CS 6.1.

Adore the review.

But, I have some question.

Compared to CS6 installation and shape, I noticed some of the difficulties in making and editing the path.

For example, as I can see by viewing the path in the shape window. I can't make a closed figure ; sometimes, I can make a closed figure, but the shape disappears after uncheck the circle, the square or the other shapes.

It is not a problem in preview or printing.

Do you think this is a problem of my installation or the the CS6 installation?

Thanks in advance.

Best regards.

**Adobe Photoshop CC** - The most striking feature of the latest version is the introduction of the dark mode, which is more akin to something that you'd usually find on an Apple product. When the user clicks on the icon, the tool bar in Photoshop immediately drops, making the UI eighty percent smaller, hence enabling a more sharpised and pixel-sharp display of the products. But do note that, for the regular users, there is no change in the functionality of the tool bar, which means that the buttons run more or less as they are, and the UI is not at all blurred when the dark mode is turned on. **Adobe Lightroom CC** - The other big update for Photoshop is the assured upgrade of the former version, Adobe Lightroom 7, to the new Adobe Lightroom CC. This upgrade is thanks to the conversion to the Creative Cloud, and enables the users to track edits and be notified of new updates in real-time. It also provides the beginner user with a substantial amount of tools. The e-commerce portal for content creators, Fotolia, will also make the contents available free of cost to the

Lightroom CC users. **Adobe Analytics** – The cloud-based engine that has been used to function Adobe’s enterprise software has been updated with the latest update, which has been dubbed as the Tool Metrics feature. This will help the company to analyse the tools such as the frequency of edits, colour adjustments, and the performance of the software. This organization-wide metric is probably the most important feature to forecast the future improvements the organization will work on it.
